

Declaration of AI usage

TO BE COMPLETED BY THE CANDIDATE BEFORE SENDING.

Annexe J asks for four things: which tool, at what point, for what, and what you reviewed or corrected afterwards. Write this section in your own words. Delete this box when you have.

Points you may want to cover:

- Which tool or tools, and at which phases.
- What you used them for: analysis, drafting, code generation, translation, arithmetic, or something else.
- What you checked yourself. Every API finding in this pack was reproduced directly against `http://149.56.128.57:3200`, and the payloads in `src/fixtures/recorded/` are verbatim captures with their provenance recorded in `MANIFEST.md`.
- What you corrected. Two conclusions in this pack were wrong and were rewritten after the live pass:
 1. Unauthenticated API access was first written up as a Blocker product defect. It is a property of the `json-server` fixture behind the demo. Six findings were re-attributed. See `08-live-verification.md` section 1.
 2. The balance was first reported as hard-coded, on the strength of a filter test that could not have shown that. It is derived, just not from the ledger. See section 4 of the same document.
- What remains unverified: no server-side rule could be tested, because the environment has no business logic; Annexe H's preprod findings could not be checked at all.
